

PUBLIC BUILDING LIGHTING

HOLY ROOD CHURCH

SWINDON, WILTSHIRE

GAMMA[®]
ILLUMINATION

PROJECT OVERVIEW

- Gamma was commissioned to design a bespoke lighting solution for the church's interior
- Gamma's Engineering team designed large cross-shaped LED pendants, built around four can luminaires with Philips Fortimo DLM inside
- Each luminaire was fitted with a round faceted reflector to add sparkle into the ceiling
- An ambient LED uplighter powered by Tridonic SLE and fitted with a glass scatter dome accessory was added to the pendant to illuminate the ceiling
- The whole luminaire was dimmable for extra flexibility during the quiet periods outside of Mass
- To help with logistics, the main components were built independently and supplied with a detailed guide to allow easy assembly on site

GAMMA
ILLUMINATION

“Thanks to Gamma’s team attention to detail at the design stage, the subsequent manufacture, scheduled delivery and on site installation went very smoothly”

Adam Cord, Lighting Designer, 4D Lighting
