

Data protection consultancy services

Data Protection compliance has never been as important as it is today. The upcoming EU General Data Protection Regulation (GDPR) will place significant legal responsibilities on organizations that collect, store or process data. We help organizations to apply best practice in achieving and maintaining compliance with EU data protection standards across differing regulatory environments and plan and implement measures in preparation for the new regulation which comes into effect in May 2018.

Data protection implementation support

We work with organizations to develop a comprehensive understanding of the scope of their environment, encompassing all flows of personal data and potential exposure to breaches or censure under the current regulation. Once the scope has been defined and formally agreed, we establish the policies, procedures, and lines of accountability necessary to meet regulatory demands.

Data Protection Officer (DPO) services

Our outsourced Data Protection Officer (DPO) services enable organizations to implement a successful data protection programme while allowing the business to continue to focus on its core activities. In addition to maintaining compliance, these services also deliver security, productivity, risk management, and cost-efficiency benefits.

Data protection / privacy impact assessments

A significant reform included in GDPR is the principle of "Privacy by Design". This principle recognizes the fundamental importance of integrating data protection and privacy considerations into an organization's operations. Privacy Impact Assessments (PIAs) are an integral part of the Privacy by Design approach. Our consultants take a practical approach to completion of PIAs.

We help organizations by:

- Conducting PIAs on the client's behalf
- Developing PIA methodologies and frameworks for our clients which can be easily integrated into existing operations and used on a continuing basis

Training

We offer a range of training courses to assist organizations to achieve the levels of knowledge necessary to meet the demands of GDPR.

Our courses include:

- **Fundamentals of GDPR**
Our one-day foundation course in GDPR will help you understand how GDPR applies to your organization
- **Certified Information Privacy Professional Europe (CIPP/E)**
This certification covers the pan-European and national Data Protection regulations as well as industry-standard best practices for corporate compliance
- **Certified Information Privacy Technologist (CIPT)**
This credential imparts the necessary knowledge needed to build your organization's privacy structures from the ground up
- **Certified Information Privacy Manager (CIPM)**
The CIPM training equips participants with the skills on how to establish, maintain and manage a privacy programme across all stages of its lifecycle

Data protection audit support

Our consultants help organizations to prepare for an audit by the Data Protection Commissioner. We provide workshops, questionnaire-based audits, onsite inspections, gap analysis and practical and policy-driven solutions in order to drive organizations to a positive audit outcome.
